PROFILE

Third-year BSc Information Technology student who turned a one-week internship into ongoing, real-world development work. I'm most drawn to backend development, designing a solid database schema and building the API layer on top of it, though I work comfortably across the full stack when a project needs it, including automation and AI-driven workflows. I'm currently a part-time backend developer at Code Café, where I lead backend work on a live production system and contribute full-stack to a client proof-of-concept; the role grew directly out of my internship at Agrisol's IT department. Looking to specialise further in backend development, while staying open to full-stack work as opportunities come up.

TECHNICAL SKILLS

Languages & Frameworks

- **Languages:** C#, Java, Python, SQL, JavaScript/TypeScript
- **Frameworks & Libraries:** ASP.NET Core (.NET), Entity Framework Core, React, .NET MAUI
- **Concepts:** Object-Oriented Programming

Tools & Platforms

- **IDEs & Editors:** Visual Studio, VS Code / VS Code Insiders, Notepad++
- **Databases:** SQL Server (SSMS), PostgreSQL (Supabase), SQLite
- **Version Control:** GitHub / GitHub Desktop
- **API & Automation:** Postman, Swagger, n8n
- **AI Tools:** Claude (AI-assisted development)
- **Other:** ClickUp, Canva

Operating Systems

Windows, iOS, Linux (basic)

EDUCATION

North-West University

BSc Information Technology

Expected completion: November 2026

Hoër Volksskool Potchefstroom

Matric Certificate (NSC)

2022

LANGUAGE

Afrikaans

English

CERTIFICATIONS

- AI Foundations (LLMs, AI fundamentals & n8n workflow automation), Skool community course
- Data Entry Certificate (available on request)

SOFT SKILLS

Leadership, team collaboration, communication, problem-solving, time management, critical thinking, adaptability, attention to detail

PROFESSIONAL EXPERIENCE

Junior Backend Developer at Code Café

February 2026 – Present (Part-time, online)

Code Café is a software development venture founded by the manager of Agrisol's IT department, together with his spouse, building custom digital solutions for external clients. I continue working with the same manager in this new venture, now focused on backend development for client projects.

- Backend lead across client projects: design and build API endpoints and domain services using ASP.NET Core, Entity Framework Core, and SQL Server.
- Own database design, schema migrations, and data integrity, including leading a relational redesign that replaced JSON-blob columns with properly normalised tables.
- Follow a consistent layered architecture (an EF Core domain layer, a service layer, and an API layer), evolving the schema through an extensive, ongoing series of migrations as requirements grow.
- Take on full-stack work when a project needs it, including building a React/TypeScript frontend and a Python (FastAPI) backend.
- Integrate with external and client-managed APIs, and set up and deploy databases (PostgreSQL/Supabase) and applications end-to-end (Railway, Netlify).
- Use Claude as an AI pair-programming assistant to support full-stack delivery, and, more recently, an AI-assisted testing workflow in place of manual API testing.
- Coordinate work using ClickUp and GitHub, with weekly team meetings and ongoing check-ins via Discord and WhatsApp; currently refining features based on client feedback.
- Connect to the company server via VPN for remote database access.
- **Tools & platforms:** Visual Studio Insiders, ASP.NET Core, Entity Framework Core, SQL Server (SSMS), React, TypeScript, Python (FastAPI), PostgreSQL (Supabase), Railway, Netlify, Postman, ClickUp, GitHub, Claude, VPN

Junior Developer (Frontend & Backend) at Agrisol (IT Department)

January – February 2026 (Full-time, on-site)

- Built a React (Vite + Tailwind) admin/monitoring dashboard, including a live activity feed, per-user message history, sales/order statistics, and a configurable per-user notification system.
- Owned the Supabase (PostgreSQL) schema design and migrations for the project.
- Configured and integrated an n8n Cloud automation workflow, extending it to handle ad-hoc task requests via chat.
- Deployed the application to Netlify.
- Contributed to a team hackathon project, pair-programming closely with a teammate on data model extensions and a photo-attachment feature; first hands-on use of Claude as a coding assistant.
- Assisted with frontend development on an additional internal Agrisol project during the final days of the placement.
- **Tools & platforms:** Visual Studio Insiders, React (Vite + Tailwind), Supabase (PostgreSQL), n8n Cloud, Netlify, Postman, Claude

IT Intern at Agrisol (IT Department)

December 2025

- Designed and built an end-to-end n8n automation workflow, working with the IT department's manager to learn the tool.
- Built a backend, including the domain model, database schema, and REST API endpoints, using ASP.NET Core, Entity Framework Core, and SQL Server, tested via Swagger.
- Worked step-by-step with the manager while he handled the frontend, learning new tools and technologies hands-on.
- **Tools & platforms:** VS Code Insiders, ASP.NET Core, Entity Framework Core, SQL Server (SSMS), Swagger, n8n

PROJECTS WORKED ON

Die Fabriek

Code Café | Production Manufacturing-Management System

Covers raw materials, consumables, manufacturing, job cards, quality control, and finished-product inventory for a production-facility client. Live and in production use.

My role: Backend lead, responsible for the majority of the API endpoints and domain services, and for the database design, schema migrations, and data integrity, working alongside the project's technical lead and a wider distributed team.

Density

Code Café | Restaurant "Busyness" Web App (Proof-of-Concept)

A mobile-first web app proof-of-concept showing live restaurant "busyness" data, piloted in Cape Town.

My role: Primary developer, frontend and backend: built the React/TypeScript frontend and the Python (FastAPI) backend, and deployed the application end-to-end. Currently at proof-of-concept/demo stage for the client.

Elsa

Agrisol | WhatsApp AI Agent

A WhatsApp AI agent built for an agricultural client that receives photos of delivery notes, extracts the data via an AI-driven pipeline, and automatically creates a matching sales record in a separate sales platform. Deployed and used live in production.

My role: Built the admin/monitoring dashboard and notification system, owned the Supabase schema and migrations, and configured the n8n automation workflow driving the delivery-note-to-sale pipeline.

KosKas

Agrisol | Hackathon Project

A one-day internal hackathon project: a pantry-and-recipe app that suggests recipes based on ingredients on hand and highlights what's still needed to buy.

My role: Pair-programmed closely with a teammate, contributing the ingredient data model extensions and the photo-attachment feature.

Lesson-Plan Telegram Agent

Agrisol (IT Intern) | Personal Learning Project

An AI-powered agent, built in n8n and delivered via a Telegram chatbot, that generates a complete lesson plan automatically from a requested grade level and topic.

My role: Designed and built the end-to-end workflow, working with the manager to learn the tool.

Trekker

Agrisol (IT Intern) | Learning Project

A workforce clock-in/clock-out web application, used as a learning project to build up backend development skills.

My role: Built the backend (domain model, database schema, and REST API endpoints) while the manager handled the frontend.

STUDENT WORK EXPERIENCE

Student Assistant (Demi)

North-West University

CMPG111 | Python | 1st Semester | 2025

- Assisted first-year BSc IT students with Python programming practicals.
- Guided students in understanding programming concepts, debugging code, and applying problem-solving techniques.
- Marked practical assignments and provided constructive feedback to support academic improvement.
- Invigilated during class tests and ensured academic integrity.
- Collaborated with lecturers to maintain consistent assessment and support standards.

CMPG112 | C# | 2nd Semester | 2025

- Assisted first-year students with C# programming practicals and debugging tasks in Visual Studio.
- Marked both practical assignments and written tests.
- Invigilated during module tests and maintained exam discipline.
- Supported students in developing structured and object-oriented programming skills.
- Worked closely with the module lecturer to streamline marking processes and student feedback.
- Responded to student emails regarding marks and enquiries.

ACADEMIC LEADERSHIP EXPERIENCE

Group Leader

North-West University

WVNS211 | 1st Semester | 2025 & WVNS225 | 2nd Semester | 2025

- Took initiative to lead a multidisciplinary student team through a semester-long university project.
- Delegated tasks effectively, ensuring every member had clear responsibilities and deadlines.
- Oversaw project progress, maintained communication, and resolved challenges to keep the team on track.
- Assembled and refined the final submission, ensuring quality, consistency, and compliance with academic integrity standards.
- Ensured the project met all marking criteria and submission requirements while upholding a high professional standard.

Project Manager (Soup Kitchen Resource Management System)

North-West University

CMPG223 | 2nd Semester | 2025

- Led a 5-member IT project team in developing a software solution using professional project management and software engineering practices.
- Created and maintained the GitHub repository, ensuring version control, documentation, and code organisation.
- Scheduled and chaired team meetings with formal agendas and minutes, and booked library work sessions to promote collaboration.
- Assigned detailed tasks after each meeting, set deadlines, and tracked progress to ensure timely completion.
- Monitored team time logs, managed contributions, and addressed conflicts and uneven workloads with accountability discussions.
- Provided technical assistance by debugging code and helping teammates resolve programming issues.
- Led the final project presentation, demonstrated the system's functionality, and addressed all lecturer questions confidently.

ACADEMIC PROJECTS

OceanView Aquarium

Database Design Project | Group Project | CMPG311 (2026)

- Contributed to a group project following the full Database Life Cycle to design and build an operational database system for a fictional aquarium, covering animal, tank, worker, feeding, maintenance, clinic, and rescue-mission management.
- Contributed to the initial study and business analysis, the conceptual/logical design (business rules, ER diagrams, dependency diagrams), and the physical implementation in Oracle SQL Developer, including tables, sequences, indexing, views, and a comprehensive set of SQL queries covering joins, subqueries, aggregation, and grouping.

PT Business Network

Network Design Project (Cisco Packet Tracer) | Group Project | CMPG315 (2026) | Group Leader

- Led a 3-member group in designing and costing a segmented business network for a fictional IT premises (workshop, design area, and reception), using a star topology with VLAN-based department isolation, a central Layer-3 managed switch, and wireless access points sized to accommodate future growth.
- Compiled the itemised hardware, cabling, and labour budget, and produced the final project documentation.

Verdict: Crime Case Tracker

Individual Project | CMPG212 (2025)

- Designed and developed a cross-platform mobile application using C# and .NET MAUI to support investigators in creating, managing, and tracking criminal case investigations.
- Implemented a dynamic XAML UI including data-entry forms, case timelines, and status dashboards.
- Built a visual case timeline feature to add chronological events, link evidence, and view progress at a glance.
- Integrated a local SQLite database to persist case data for offline, on-the-go usage, with enforced data validation.

Soup Link System

Soup Kitchen Resource System | Group Project | CMPG213 & CMPG223 (2025)

- Designed and developed a resource management system to assist soup kitchens with administration, inventory control, and reporting, across a two-semester Analysis & Design → Build cycle.
- Served as Project Manager: coordinated team roles, structured the GitHub repository, led weekly meetings, and oversaw progress to final submission and presentation.
